

Large Playground Shelter - Real Value

Reference:SH191028

Price: £2,000 (exc. VAT)

The Large Shelter is a fantastic multi-purpose shelter, it can be used as an outdoor classroom, a break time meeting place, an area for guided or non-guided outdoor role play or simply a space to sit and chat with friends in all but the very worst weather.

The Large Shelter has a high roof and low panel walls so there's plenty of visibility into and out of this shelter and the decked floor means children are never traipsing mud back into the classroom.

Seating along both sides included

Finished with Timber Protection.

Pressure Treated Timber

General Information

Guarantee

The product is guaranteed against structural and design defect for 3 years - this does not cover acts of vandalism, misuse or exceptional natural events

As long as the maintenance instructions are adhered to, the product will last substantially longer.

Maintenance Required

- Ensure that an air gap is maintained under the base and around all sides; check on a regular basis to ensure that there is no build-up of debris.
- Check edges and corners regularly to ensure that knocks to the structure have not caused a splinter hazard, if that has occurred sand down with sandpaper and re-treat the sanded area.

Delivery & Installation

Delivered flat pack for self installation

Specification

All our products are built to fully comply with EN1176-1 playground regulations

Build Specification

The following specification reflects that of the featured build with the price shown at the top of this document. Please refer to our website for details on other build options.

Floor

Decking - Ground level

- The decking boards are good quality 38mm x 125mm grooved redwood boards that are pressure treated.
- The deck boards are screwed to the pressure treated timber bearers
- A weed prevention membrane is fitted below the decking to ensure that there is no plant growth up through the boards.

For an additional cost the decking can be painted with an anti slip paint, please ask for details.

Roof

Mineral Felt

A standard finish, good at keeping out the weather but not the most aesthetically pleasing of our roof options.

- The roof bearers are fitted to span across the apex: the size would depend on the span but it would be a minimum of 75mm x 50mm. The timber would be good quality redwood, planed with swept edges
- 12mm wbp external grade plywood is fitted to the top surface
- A layer of BBA approved breathable membrane is fitted as an underfelt
- A layer of 38kg mineral felt is fitted as the top surface and secured using galvanised staples.
- In the case of a large roof, pressure treated batons are fitted perpendicular to the roof felt
- The roof edges will be secured with a fascia board, the top finished with a ridge board and trim is fitted to the bottom.
- Guttering is always recommended and can either be fitted by us or retrospectively by you once installed.
